**TIPS**

- Choose a well-drained aerated propagation media.
- Avoid excess irrigation and fertilization while plants are establishing which can lead to slow root development. Once plants have established, do not allow to dry excessively which will result in damage to foliage and flowers.
- A well balanced fertilizer container ample quantities of iron and magnesium is especially important when flowering begins. Provide periodic clear water application if excess salts accumulate.
- Excess fertilizer can inhibit growth and increase instances/susceptibility to root diseases.
