# **PROPAGATION**

# **DAHLIA REVELATION**

Dahlia x hybrida

# TRAY & ROOTING

Form **Vegetative Cutting (URC)** 

Rooting Hormone? **No** 

Tray Size **50, 72, 84** 

Plants Per Cell 1

Days In Mist 5-10

Wks. From Stick To

Transplant

3-4

Propagation Pinch? Yes

Weeks To Pinch

3

### **FERTILITY**

Fertilize Through Mist? 50-75ppm N

Fertilizer Rate 100-150ppm N

EC Range Moderate: (2.0-3.5 mS via

SME)

pH Range **5.6-6.2** 

### **TEMPERATURE**

Average Soil Temp **70-75°F (21-24°C)**Average Air Temp (Day) **70-75°F (21-24°C)** 

Average Air Temp(Night) 65-68°F (18-20°C)

### **IRRIGATION**

Level 4: Keep media
Irrigation Frequency moderately moist at all

times

LIGHT

Daylength Neutral? **No** 

Supplemental 14 hour days

Benefits From Shade? No

# POTENTIAL DISEASES

Rhizoctonia, mildew

### POTENTIAL PESTS

Thrips, Fungus Gnats, Aphids

### **PGR SUGGESTIONS**

- 1,500-2500ppm B-Nine (85% Daminozide) spray
- 300-500ppm Florel (3.9% Ethephon)

## **CULTIVAR LIST**

Pink, Red, Salmon Bicolor, Soft Orange, Yellow

### **TIPS**

- Stick deeply up to the first set of leaves to allow stem roots to form.
- An optimal growing mix should be well drained with sufficient moisture retention to prevent daily wilting.
- Dahlias, in general, should be kept evenly moist avoiding dramatic wet-dry cycles

| Dhizactonia mildor         |   |                              |

Rhizoctonia, mildew

### POTENTIAL PESTS

Thrips, Fungus Gnats, Aphids

## **PGR SUGGESTIONS**

- 2,500ppm B-Nine (85% Daminozide) spray
- 0.5ppm Bonzi (0.4% Paclobutrazol)

'Pink'

## **TIPS**

- Transplant deeply, can even bury the first set of leaves to allow stem roots to form.
- A complete blend 17-5-17 fertilizer is the best for a balanced well-shaped finished product.
- Dahlias are very responsive to PGRs; use the least harsh chemical treatment in your greenhouse to avoid stunting plants.
- Plants must be grown under long days with a minimum daylength of 14 hours but no more than 16 hours of sunlight a day. More than 16 hours daily will promote vegetative growth and delay flowering. Nighttime interruptions are not recommended as a substitute
- Can be pinched about 2 weeks after transplant when roots have established and top growth is obvious. Removing 1-2 nodes helps to improve branching and increase the number of blooms, but may delay flowering. Earlier pinching will reduce crop time.

# FEATURES AND BENEFITS

# DAHLIA REVELATION

Dahlia x hybrida

# **KEY INFORMATION**

Primary Common Name **Dahlia** 

Consumer Watering Water thoroughly when top 1 inch (3cm) of soil is dry.

Bloom Time Blooms Spring to Autumn

Exposure

Full Sun to Part Shade

Height

12-24 inches (30-61 cm)

Garden Spacing

10-12 inches (25-30 cm)

**DESCRIPTION** 

A gardener classic incorporating compact genetics and bombastic blooms.

## **CONSUMER APPEAL**

- The very charismatic and photogenic flowers make dahlias one of the strongest impulse buys at retail.
- The visually striking "pompom" shaped flowers make great cut flowers.

## **GARDEN ATTRIBUTES**

- Good in containers located in high-traffic areas where onlookers can appreciate the showy flowers.
- These well-rounded plants maintain uniform growth and resist lodging with their strong stems.
- Plants are very easy to grow and tubers may be dug for winter storage at the end of the growing season.

## NATIVITY

Of hybrid origin: parental lineages native to Mexico.

'Yellow'

'Salmon Bicolor'
