### DESCRIPTION

Coreopsis is undoubtedly one of the most popular native pollinator plants available to homeowners and landscapers. It is low maintenance, drought tolerant, pollinator friendly, and loaded with blooms throughout the growing season.

### CONSUMER APPEAL

- The showy golden flowers are a dramatic beacon for bees and butterflies.
- Native to prairies, glades, roadsides, and open woods throughout North America, this plant is very drought tolerant once established. Additionally, it is deer resistant.

### GARDEN ATTRIBUTES

- Although not particularly fragrant, coreopsis make good cut flowers, especially in rustic arrangements.
- Coreopsis is the ultimate perennial for pollinator gardens, borders, naturalized areas, meadow gardens, prairie gardens, cottage gardens and even in mixed container displays.
- Prefers well drained soil where it can survive in dry to moderately moist soils. Can tolerate clay as long as it does not receive too much moisture.
- The best way to promote reblooming is to aggressively shear the plants back after their initial bloom. This will promote fresh new growth full of vitality.

### NATIVITY

Native to North, Central, and South America though the majority of ancestral species are centered in modern day USA.

### COMPANION PLANTS

*Gaillardia, Salvia, Solidago, Achillea, Lavandula, Perovskia, Gaura, Scabiosa, Penstemon*

'Peach Sparkle'
